

Resilient Food, in Times of Pandemic & Beyond

Farmer and Farm Supporter Interviews

We seek to support coordination and collaboration among food producers and consumers within our communities, both during the COVID-19 pandemic, and beyond. Our work is on Informatics for Community Food Resilience, where we take a farmer-centered and community-driven approach to the design of processes and digital technologies. For more information on this project see: <https://resilientfood.org/>. We're looking for farmers, advisors, community organizers, and farm tool developers to guide what we design and build.

Who: Farmers producing food for human consumption and either currently selling, or planning to sell directly to consumers OR farm advisors, community organizers, and farm tool developers.

What: Participate in a 2 hour video-recorded interview about problems and information challenges faced by farmers during COVID-19 and tools used or needed to cope.

When: Interviews times available starting now! We will schedule interviews at your convenience!

Where: Interviews will be conducted remotely via videoconference.

Thank you: As a thank you to farmer-participants during this trying time we will be providing \$40. Unfortunately, we do not have funding to also financially thank non-farmer participants at this time, but we appreciate your time none-the-less.
